RE: Florida Hospital Winter Garden

To whom it may concern:

It is with pleasure that we recommend Regency Electric for consideration of an Excellence in Construction Award for their work at the Florida Hospital Winter Garden project. The hospital aims to serve the needs of the growing Winter Garden community with outpatient services and rooms for local doctor examinations included in the facility. The Winter Garden project is a 97,000 square foot new hospital building which includes 26 emergency department exam rooms, 2 Trauma Suites, 3 Operating Rooms, along with multiple imaging, examination rooms and radiology rooms.

The Florida Hospital Winter Garden project is an extensive site which included over fifty 30-foot high poles, including decorative area and pathway lighting. A significant challenge on the project was an accelerated schedule and a design assist construction process. Throughout the project, Regency Electric provided quality and timely installations. The project required extensive coordination, included extensive underground utility and BIM coordination methods. The MEP and electrical components were planned, coordinated and installed to minimize exposed conduits in the electrical and mechanical rooms, thereby providing a clean and safe electrical installation. The commissioning, testing, and acceptance of the project was expedited by all parties, and Regency Electric and their team succeeding in satisfying all the regulatory inspections, including AHCA, in a professional and expedited manner. Regency's expedited Owner training, as-builts, and final documents assisted in closing out the project efficiently.

We would recommend Regency Electric Company, Inc. for any difficult or complex project, as they delivered the Florida Hospital Winter Garden project on time and with high quality electrical products.

We have enjoyed working with the Regency Electric team and would recommend them, without hesitation, to anyone requiring top-quality electrical services.

Sincerely,

Wayne Wright

Sr Project Director
